

As you come in...

Think about a moment from 2020–2022 when
learning either
worked surprisingly well or **completely fell
apart**

We'll start there.

Relationships First, Then AI

What the Pandemic Taught Me About Teaching in the AI Era

AI literacy begins with the conditions learning requires

What made learning work—or fall apart?

During 2020–2022...

What made learning **work**?

What made it **break**?

Relationships

Trust

Belonging

Structure

Learning depends on...

Relationships

Trust

Community

These are not extras. They are preconditions.

Seven years. Four experiments. One conclusion.

2019-2023

Building the relational foundation

Before AI arrived

Spring 2024

Chatbots as ideal classmates

AI as a peer, not a tool

Fall 2024

Students maintain the knowledge base

Delegation as learning design

Spring 2025

Students build their own study tools

It worked — and felt wrong

Fall 2025 – Spring 2026

Model it visibly. Then have them do it in front of you.

This one worked. Here's why.

Do not automate the work that brings intrinsic reward.

What changes now?

What might you **stop automating** as a result of this?

AI literacy is not just a skill set. It's a social achievement.
